- Infertility investigation and counselling

"It is our principle that all women have the right to motherhood". Today infertility can be treated. Our philosophy is based on detailed counseling, patient friendly fertility treatments, individualized approach and the use of the latest scientific methods of assisted reproduction technology (ART).

We apply Mild Ovarian Stimulation Protocols as first-line treatment which offer many advantages including fewer days of injections, lower total dosage of medication, lower costs and fewer complications as well as pioneering strategies for prevention and management of Ovarian Hyperstimulation Syndrome (OHSS) according to our published studies.

Our Unit is not a mere observer of scientific developments, but a pioneer in research and contributes actively with the publication, in international journals, of original studies that increase the efficiency and safety of IVF. The results of our studies guarantee top pregnancy rates, which in some cases are similar or even higher than several renowned IVF Units in Europe and USA. Part of our contribution is to inform clinicians but also the general public with the publication of our book, which is the only scientific edition on IVF in Greece today."

Tryfon G. Lainas
MD PhD, Reproductive Gynecologist
Director of Assisted Reproduction Unit Eugonia
